JOURNAL OF APPLIED GEOPHYSICS

Contents Volume 39, 1998

Research Papers

Ground penetrating radar imaging of a collapsed paleocave system in the Ellenburger dolomite, central Texas
G.A. McMechan, R.G. Loucks, X. Zeng and P. Mescher 1

Determination of vertical magnetic anomalies and equivalent layer for the European region from the Magsat measurements
K.I. Kis and G. Wittmann 11

The density of the rock covering Gran Sasso Laboratories in Central Apennines, Italy by underground gravity measurements
P. Capuano, G. De Luca, F. Di Sena, P. Gasparini and R. Scarpa 25

Geoelectrical soundings and their relationship to hydraulic parameters in semiarid regions of Jalore, northwestern India
G.S. Yadav and H. Abolfazli 35

Spectral analysis of gravity anomalies caused by slab-like structures: A Hartley transform technique
N. Sundararajan and G. Rama Brahmam 53

Three-dimensional modelling of VLF data
D. Beamish 63

Processing of surface proton magnetic resonance signals using non-linear fitting
A. Legchenko and P. Valla. 77

Tomographic inversion using shape and velocity parameters
M.J. Bottema, M.J. Rutty and N.K. Spencer 85

An integral equations solution of the forward D.C. geoelectric problem for a 3-D body of inhomogeneous conductivity buried in a halfspace
M. Hvoždara and P. Kaikkonen 95

Velocity modelling of Bengal Basin refraction data—refinement using multiples
P.R. Reddy, A.S.S.S.R.S. Prasad and D. Sarkar. 109

Geophysical reconnaissance of earthquake-induced liquefaction features in the New Madrid seismic zone
L.W. Wolf, J. Collier, M. Tuttle and P. Bodin 121

Seismic reflection surveys of the Krško basin structure: implications for earthquake hazard at the Krško nuclear power plant, southeast Slovenia
A. Gosar 131

2-D nonlinear joint inversion of VLF and VLF-R data using simulated annealing
P. Kaikkonen and S.P. Sharma. 155

The use of inverse geotherms for determining underground water flow at the Ombla karst spring near Dubrovnik, Croatia
D. Ravnik and D. Rajver. 177

Determination of depths to centroids of three-dimensional sources of potential-field anomalies with examples from environmental and geologic applications
D. Ravat and P.T. Taylor 191

An automatic radon probe for earth science studies
M. Monnin and J.L. Seidel. 209

Combination of common-midpoint-refraction seismics with the generalized reciprocal method
D. Orlowsky, H. Rüter and L. Dresen 221

The main structure and tectonic features of the Chernorud-Mukhor site on the western shore of Lake Baikal from TEM and SP measurements
N. Kozhevnikov and B. Tezkan 237
